jQuery
Ejs
Node.js
Express.js
Selenium
Appium
TestNG
Maven
Postman
Insomnia
Cucumber

CI, Tracking and Version Control

JIRA
GitHub
Jenkins

Database & Operating Systems

MongoDB, SQL, Windows, MacOS

WORK EXPERIENCE

Software QA Engineer, S44; Montvale, NJ May, 2020-Present

I am currently working on the Electrify America Project. The project involves remodeling and relaunching of the Electrify America and Electrify Canada Mobile Applications on Android and iOS platforms. I am responsible for leading the QA team on all internal testing efforts (including on-site testing with real chargers). I also single-handedly worked on developing the automation framework using Appium to help simplify the testing process. I also had been part of BMW project where I was responsible for web application testing both manually and with automation using Selenium.

Responsibilities:

- Following the SDLC and STLC processes and using requirement documents to create test plans on Confluence while providing test estimates, documenting test strategy and objectives, assessing and identifying testing risks, and developing test scenarios and test cases.
- Providing training to all new QA engineers and leading the Electrify America QA team.
- Coordinating testing efforts between all the technical teams involved.
- Regularly Interacting with clients to make sure all testing efforts are conducted as per expectations and providing demos on progress made on the applications.
- Performing manual testing and generating test reports on Zephyr.
- Executing full automation tests in every regression build and providing reports to the project managers.
- Performing functional testing of the mobile applications, web applications as well as API and lab testing.

PROJECTS

AssisTom- Personal Assistant Application

An application that serves as a personal secretary.

-AssisTom provides all essential information necessary for the day including current date and time, news, weather and events.

-It allows user to manage schedule and lists (grocery and to do checklists)

-Allows user maintain daily journals.

Tools Used: HTML, CSS, Bootstrap, Node.js, Express.js, MongoDB, Weather and News Apis

Link to application: <http://www.assistom.net>

Other Projects available in portfolio: Notes-Keeper(React Application), TinDog, Simon Game, Dice Game, Drumkit

EDUCATION

Southern New Hampshire University

BS in Computer Science

Concentration in Software Engineering

Expected Graduation: May 2023
